Aravind R
Frontend-UI / Full-stack Developer
React.js | Next.js | Angular | Node.js | AWS | Azure

+1 6699998696
arvireddy99@gmail.com
linkedin.com/in/arvireddy99

Professional Summary:

Senior Frontend / UI Engineer with 15+ years of experience building large-scale, high-performance web applications across telecom, healthcare (FHIR/EHR/Prior Auth), banking, and e-commerce. Expert in Angular (6–19), React, Next.js (SSR/SSG/ISR, App Router, API Routes, middleware, image optimization), Vue.js, React Native, TypeScript, JavaScript (ES6+), HTML5, CSS3/SCSS/SASS/LESS, Bootstrap, Material UI, Chakra UI, Kendo UI, PrimeReact, D3, Chart.js, and micro-frontend / design-system architectures. Proven track record delivering EHR-embedded SMART on FHIR apps, FHIR R4–based clinical dashboards, and prior-authorization workflows, as well as complex portals and Next. js-based marketing/portal sites integrated with Contentful CMS, AEM, Astro, and Gatsby. Deep experience with state management and UI tooling, including Redux, Redux-Saga, NgRx, Zustand, MobX, RxJS, Storybook (WCAG/ADA/508-compliant component libraries), A/B testing tools (VWO, Optimizely, Maxymiser), and strong accessibility focus. Full-stack capable with Node.js/Express, FastAPI, Python, Java/J2EE, REST and GraphQL APIs, WebSockets, microservices, and data layers spanning MongoDB, MySQL, PostgreSQL, DynamoDB, ElasticSearch, and PL/SQL. Skilled across AWS (Lambda, CloudFront, OAC/OAI, S3, DynamoDB, Lex, Connect, CloudWatch), Azure (Functions, AAD, API Management, Blob, Cosmos DB, App Insights), Docker, Kubernetes, and modern CI/CD pipelines (Jenkins, GitLab CI, Azure DevOps) with robust automated testing using Jest, Cypress, Playwright, Enzyme, Karma, Jasmine, React Testing Library. Collaborates closely with product and UX teams (Figma, Adobe XD, Framer X) to translate complex domain workflows into intuitive, responsive, secure, and maintainable front-end solutions. Experienced in AI-assisted development using GitHub Copilot, ChatGPT, and Claude to accelerate component generation, UI scaffolding, and workflow implementation.

Technical Skills:

Technologies	HTML 5, CSS3, JavaScript, Typescript, jQuery, React JS, Redux, Angular, ES6, NGRX, NodeJS, Express JS, Charts JS, Vue JS, Next JS, Hapi JS, Charts JS, Graph QL, Prisma, Java/J2EE, Python, D3 JS, JSON, AJAX, Material-UI, Tailwind CSS, Bootstrap, Hibernate, JDBC, Babel, .NET, C#, GoLang, Qualtrics
Testing Frameworks	Jest, Enzyme, Mocha, Jasmine, Karma, Cypress, Protractor, React Testing Library
CI/CD Tools	Maven, Jenkins, Bamboo, GitLab, GitHub Actions
IDE	Visual Studio, IntelliJ, Sublime, Notepad++, Eclipse IDE, WebStorm
Databases	Oracle, MySQL, SQL Server, Mongo DB, PostgreSQL, Dynamo DB
Build Tools	Webpack, Rollup, Grunt, Gulp, Vite
Application servers	Tomcat Server, WebSphere, WebLogic. AWS
Version Control Tools	SVN, CVS, GIT, TFS, VSTS, GitLab, GitHub, Bitbucket
Project Management	JIRA, Confluence, Trello, Workday, Rally, Monday
Project Methodologies	Agile, Scrum, Waterfall
AWS Technologies	S3, EC2, RDS, Lambda, CDN, Cloud Watch, SNS, SQS, EKS, ECS

Professional Experience:

Verizon, Basking Ridge, New Jersey **Nov 2022 - Present**
Sr. Frontend / Full Stack Developer

Responsibilities:

- Designed and developed web pages using **HTML5, CSS3, JavaScript, TypeScript**, **Bootstrap, Webpack, SASS, LESS, React, React Native, NextJS, Redux, Zustand, MobX,** and **NodeJS**
- Developed a single-page application (SPA) using **HTML5, CSS3, Bootstrap, React, Next.js, GraphQL, Express JS, NodeJS, Socket**, **SASS**, and **LESS**.
- Built the UI for the Chatbot Template Builder application that enables business users to create customized chatbots tailored to their requirements, use cases, and preferences through various configurable elements
- Experienced in AI-assisted development using **GitHub Copilot, ChatGPT,** and **Claude** to accelerate component generation, UI scaffolding, and workflow implementation.
- Developed a scalable **React component library** for marketing and portal applications across **Next.js** and **Gatsby**
- Implemented **component APIs** reused across **SSR/SSG** platforms (**Next.js**, **Astro**), reducing code duplication
- Maintained **Storybook** documentation with interactive component playground
- Integrated **Contentful CMS** with dynamic content-driven **React** components
- Maintained **LookML** models, including views, explores, dimensions, and measures, to support scalable analytics and reporting. Performed **LookML** validation and testing to ensure correctness during schema changes.
- Built and maintained full-stack survey workflows using **React**, **Next.js**, and **Go**, enabling seamless integration between web platforms and **Qualtrics**. Implemented end-to-end **Qualtrics integrations**, including survey embedding, API-based configuration, metadata synchronization, and response lifecycle handling.
- Developed responsive, role-based interfaces for Survey Authors, Coordinators, and Respondents using **React/Next.js,** improving usability across desktop and mobile devices.
- Created backend services and API integrations in **Golang** to manage survey metadata, business rules, and system interoperability. Built admin dashboards for monitoring active surveys, expiration timelines, and response volume, improving operational visibility. Implemented audience targeting, **CSV** bulk import, and delegate management workflows for secure, invite-only private community surveys.
- Collaborated with backend and cloud teams to integrate **Angular** applications with **GCP** services, including **Cloud Run**, **Cloud Functions**, **Firebase Hosting**, **BigQuery**, and **Vertex AI**.
- Designed cloud-ready, scalable frontend systems integrated with **AI** services and Google Cloud Platform (**GCP**).
- Developed proofs-of-concept (**POCs**) to evaluate emerging **AI**, **LLM**, and **GenAI** technologies
- Implemented secure **API** communication between Angular apps and **GCP** services using **OAuth**, **API** keys, and **IAM**-based access control.
- Migrated monolithic front-end to a modular **AWS** architecture (**CloudFront, S3, Lambda, DynamoDB**) using **AWS CDK**. Implemented semantic versioning and npm publishing workflows for component releases.
- Deployed **GraphQL** microservices on **AWS Lambda** with **DynamoDB**, supporting high-traffic product **APIs**. Developed **CLI** utilities to automate component generation and **CMS** model synchronization.
- Created testing pipelines (**React Testing Library** + **Playwright**) integrated into **CI/CD**.
- Leveraged **GenAI** tools (**Copilot**, **ChatGPT**) to accelerate boilerplate creation, documentation & code refactoring
- Designed layouts on the front end and developed web pages responsive for smartphones, tablets, and Personal desktops using **HTML5, CSS3, Bootstrap, jQuery, React HOC, Redux toolkit,** and **React Promises**
- Worked on responsive web design (**RWD**) and developed webpages that could be served to desktop, tablets, and mobile environments using **React JS** and **Next JS**, focusing on usability and accessibility
- Implemented **RESTful APIs** using **FastAPI**, improving the performance and scalability of backend services.
- Built responsive layouts using **Flexbox** and **CSS Grid**, delivering seamless experiences across desktop, tablet, and mobile environments. Created reusable layout utilities, Grid templates, Flex helpers, and spacing utilities.
- Built **cross-platform components (**e.g., buttons, inputs, layouts) that followed a unified design spec and behavior, reducing duplication between **React** and **Flutter** implementations.
- Shared backend services (**REST** APIs, **Firebase Auth/Firestore**) between both platforms to reduce duplication
- Implemented server-side rendering (**SSR**) and static site generation (**SSG**) to optimize performance and **SEO**.
- Revamping and rewriting the front end using **React**, **Redux-Saga,** and **Webpack**
- Optimized **Webpack** builds with code splitting, lazy loading, tree shaking, and production profiling.
- Authored unit and integration tests using **Jest** and **React Testing Library** to maintain 90%+ coverage
- Managed and optimized **MongoDB** databases, ensuring data integrity and efficient querying.
- Utilized **hooks** and **Context API** to manage state and lifecycle methods component-based architecture efficiently
- Provided development support services for engaging, including **Elastic search, HTML, CSS**, Responsive Web Design, Test Driven Development (**TDD**), Continuous Integration (**CI**), and Continuous Delivery (**CD**).
- Integrated **GraphQL** for product catalog retrieval, resulting in a more efficient and flexible data-fetching process.

- Worked with **Redux Saga,** along with **Redux thunk,** to handle asynchronous calls efficiently
- Implemented Micro Frontend (**MFE**) architecture for scalability, maintainability, and development speed.
- Implemented **JWT**-based authentication and authorization mechanisms to secure **API** endpoints.
- Experienced in integrating UI microservices with **CI/CD** pipelines using Jenkins, **GitLab CI**, or **Azure DevOps** and managing backend communication via **RESTful APIs** and **GraphQL**.
- Customized **AEM** Content Management System (**CMS)** templates and components using **HTML5, CSS3, JavaScript,** and modern frameworks (**React**, **Angular**) to deliver dynamic, content-rich experiences.
- Collaborated with **Adobe Experience Manager** (**AEM**)content authors and marketing teams to design reusable components and page templates, reducing time-to-publish by 40%.
- Built a customized agent UI for **AWS Connect** with real-time call status and analytics. Developed an interactive voice and chat assistant using **Amazon Lex** and **AWS Lambda** with improved usability and efficiency
- Managed cloud desktops, integrating **AWS EC2** instances and **VPC** networking to facilitate seamless provisioning
- Used **AWS Connect,** built a customer insights dashboard for agents, displaying live customer interactions
- Replaced legacy **OAI** with **OAC**, enabling request signing, tighter security policies, and **IAM** management.
- Integrated **CloudFront** + **Lambda@Edge** with **OAC** for optimized caching, custom headers, and content delivery.
- Debugged **Java microservices APIs** to analyze defects and ensure backend/frontend integrity.
- Monitored and analyzed logs via **Splunk** & **Dynatrace**, identifying issues and setting alerts to enhance reliability.
- Developed reusable UI components using **Storybook** with **WCAG 2.1 compliance.** Implemented **Storybook** addons for **A11Y** (accessibility checks), Knobs/Controls (dynamic props), and Actions (event handlers)
- Integrated **Storybook** with **Figma**/**Adobe XD** designs, achieving 100% design-to-code accuracy.
- Coordinated with integrating **RESTful APIs** and integrated them with front-end applications using **Express.js** and **Python frameworks** (Flask/Django). Achieved **API** calls from back-end **NodeJS** using **React Axios**
- Optimized query performance by utilizing **SQL** queries to interact with **MySQL** and **PostgreSQL** databases,
- Used **React** along with **Framer X** to add interactivity and functionality to the designs, along with **Adobe XD**
- Implemented **performance-tuning** by efficiently handling DOM manipulation, minimizing browser reflows
- Developed unit testing scripts using **Jest, Enzyme, Cypress,** and **React test renderer** for React components
- Optimized UI performance by implementing **lazy loading**, **SSR**/**SSG** (**Next.js**), and caching strategies
- Experience working with **Azure** services (**Azure** Functions, **AAD**, **API** Management, **Blob** Storage, **Cosmos DB**) and configured **Azure Application Insights** for real-time frontend performance monitoring and error tracking
- Streamlined UI testing and quality checks, automating **Jest** and **Cypress** tests in **Azure** Pipelines.
- Led the migration of a complex **Angular** application to **React**, enhancing performance, maintainability, and scalability. Converted **Angular** components to reusable and efficient React components, ensuring consistency
- Utilized **TypeScript** in **React** to ensure type safety and improve code quality during migration to **Angular 19**.
- Developed scalable UI components using **Angular 19**, **TypeScript**, and **SCSS** across multiple applications.
- Designed and implemented **Micro-Frontend** (MFE) architecture, allowing independent deployment and integration of UI modules into a larger host application.
- Designed efficient in-memory data models to reduce API calls and improve UI responsiveness. Improved system performance by analyzing time and space complexity (Big-O) of critical operations. Used graph traversal algorithms (BFS/DFS) for dependency resolution and workflow orchestration.
- Implemented **AWS CloudFront OAC** (Origin Access Control) to secure **S3**-backed static assets and **Next.js** builds.
- Created developer-friendly tooling (linting rules, commit hooks, **CI** checks) to enforce coding standards.
- Leveraged **NgRx** for advanced state management and seamless **API** integration, improving performance.
- Built responsive UIs compliant with **WCAG 2.0/2.1** standards, using **Material UI, Chakra** & **Kendo UI** libraries.
- Audited UI components with tools such as **Lighthouse**, axe, and browser dev tools to identify and fix color contrast, landmark, and **ARIA** issues
- Implemented and supported **Section 508, WCAG,** and **ADA** compliance during the development of applications.
- Optimized **GIS**-enabled visualizations using **deck.gl**, **Azure Maps**, and **ArcGIS API**, implementing geocoding, routing, and spatial analysis for enhanced decision-making.
- Integrated **AWS CloudWatch** logs for real-time monitoring of **UI** events and performance metrics. Optimized performance for **VPC** connectivity and **API** request handling, reducing latency in cloud desktop management.

Environment: React JS, Node JS, Redux, MobX, Axios, NPM, Next JS, GraphQL, Vue JS, Vuex, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, SASS, LESS, jQuery, AJAX, JSON, PL/SQL, Mongo DB, Jenkins, AWS Cloud, Azure, CI/CD, Micro Services, SVN, GIT, Docker, Kubernetes, Jest, Enzyme, Micro Frontend (MFE), Microservices, Responsive Web Design

Cigna, New York, NY **July 2020 – Oct 2022**
Sr. Frontend Developer

Responsibilities:

- Designed and developed Portal using **Angular 12/13/14** along with **HTML5, CSS3, JavaScript, jQuery, Bootstrap,** and **TypeScript.** Worked on **Angular** with **TypeScript** and other latest client-side technologies, including **ReactJS, ES6, Gulp, NodeJS, RxJS, Angular CLI, Webpack, Chrome DevTool, Karma, and Jasmine**
- Developed scalable web applications with **TypeScript** and **Python**, enhancing performance and maintainability.
- Implemented Angular front-end modules that consume **FHIR**-based REST APIs (R4) for patient demographics, encounters, medications, and lab results, enabling real-time clinical data views inside the **EHR**.
- Built reusable TypeScript models and services around **FHIR** resources (e.g., Patient, Observation, Condition, Coverage, Claim) to standardize data access across multiple Angular modules.
- Integrated **SMART** on **FHIR** app front-end flows, including **OAuth2 / OpenID** Connect launch, token handling, and secure context passing from the **EHR** to the Angular SPA.
- Developed **EHR**-embedded Angular components to display patient charts, timelines, and lab trends, optimizing change detection and virtual scrolling for large clinical datasets. Implemented role-based UI (physician, nurse, billing specialist) driven by claims/authorization status and permission metadata from the EHR.
- Collaborated with clinicians and product teams to translate clinical workflows (e.g., chart review, order entry, prior auth submission) into intuitive UI flows with minimal clicks and clear decision support.
- Optimized performance and reliability of **AI**-enabled applications using **GCP** serverless services and frontend optimization techniques. Implemented frontend security controls aligned with **GCP** standards.
- Implemented secure access patterns for **AI APIs** using **GCP IAM** and environment-based configuration.
- Managed data processing pipelines using **PySpark** and **SQL**, ensuring efficient dataset transformations.
- Migrated from **Vue.js v3** to **Angular 14**, focusing on component reusability, state management, and routing
- Addressed differences in lifecycle hooks between **Vue.js** and Angular, adapting code to **Angular 14**'s lifecycle methods such as **ngOnInit**, **ngOnChanges**, and **ngOnDestroy** for proper component management
- Experience with the **Vue.js** ecosystem, including setting up projects with **Vue CLI**, managing global state with **VueX**, handling navigation using **Vue Router**, and utilizing **Vite** for faster builds and optimized workflows
- Experienced in integrating **RESTful APIs** into **Vue.js** applications using **Axios** and **Fetch API**
- Integrate with frontend technologies like **HTML**, **CSS**, **JavaScript**, and **AJAX** for building user interfaces
- Responsible for deployments on Docker Compose environment for **NodeJS** apps running on a stack with **PostgreSQL** and **Elastic Search** on **AWS.** Experience in using **Azure** functions to talk to the UI.
- Experience working on various **UI Charting tools** such as **PrimeReact, Chart.js, Recharts,** and **FusionCharts**
- Managed **SQL** databases (**MySQL**, **PostgreSQL**, **SQLite**), including schema design, indexing, and optimization to ensure efficient data retrieval and storage. Resolved database-related issues in **MySQL,** minimizing downtime
- Utilized **J2EE** frameworks such as **Spring**, **Hibernate**, **Struts**, and **JSF** for application development
- Built components using **Angular** and **RXJS** platforms and developed components for reusability
- Experience using **Webpack**, **Babel**, **Grunt**, and **Gulp** for transpiration (compilation) configuration for **converting TypeScript** to **JavaScript.** Maintained **QA** environment using **AWS EC2** with **GitLab CI/CD**
- Experience working with **RESTful** Web Services and implementing **RESTful APIs** and **SOAP** protocols.
- Worked with **JSON** web tokens for authentication and authorization of security configurations using **Node.js**
- Experienced in using **GitLab CI** and **Jenkins** for **CI** and End-to-End automation for all builds and **CD**
- Utilized tools like **Jenkins, Docker, Docker Compose**, and Helm to build, test, and deploy code
- Used **Framer X**, **Adobe XD**, and Figma for prototyping interactive user interfaces provided by the **UX** team.
- Exposure to Application Servers like **IBM WebSphere, BEA WebLogic, Apache Tomcat,** and **JBoss**.
- Collaborated to integrate **TypeScript**-based front-end solutions with **Python**-driven back-end services.
- Built and optimized data transformation pipelines using **PySpark**, enabling efficient processing of large datasets.
- Integrated data visualizations using **Tableau/Power BI**, enabling data-driven decision-making for stakeholders.
- Implemented **performance-tuning** strategies such as reducing the number of **HTTP** requests by combining **CSS** and **JavaScript** files, using image sprites, and implementing browser caching. Used **SASS** and **LESS**
- Familiar with version control systems and collaboration tools like **Git** and **Azure DevOps**
- Worked on cross-browser compatibility and responsiveness in UI **microservices** development

- Supported maintenance of mobile applications using **Apache Cordova**, leveraging web technologies (HTML5, CSS3, JavaScript) for cross-platform compatibility. Worked with **Grunt** and **Gulp** for task runner configurations
- Also used Visual Website Optimizer (**VWO**) and **Optimizely** for **A/B testing** using dashboards for campaigns
- Familiarity with real-time data processing with **Kafka**, **RabbitMQ, Node.js**, **RESTful APIs**, and **WebSockets**
- Collaborated with cross-functional teams working in **Agile** or **DevOps** environments.

Environment: Angular 10/11/12/13/14, React JS, Node JS, Redux, MobX, Axios, NPM, Vue JS, Vuex, Next JS, GraphQL, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, SASS, LESS, jQuery, AJAX, JSON, Mongo DB, Jenkins, AWS Cloud, Azure, CI/CD, Micro Services, SVN, GIT, Docker, Kubernetes, Jest, Enzyme, Microservices, WebSphere, WebLogic

PNC Bank, Pittsburgh, PA **Sep 2019- June 2020**
Sr. UI Developer

Responsibilities:

- Transition legacy Cordova/Angular mobile app to **React Native**, enhancing performance and modernizing UI
- Developed a white-label **React Native** application supporting rapid customization and deployment for multiple branded clients. Utilized **TypeScript** to improve code quality, readability, and long-term maintainability.
- Built custom UI components and responsive layouts using **Flexbox**, **StyleSheet**, and **react-native-paper/UI Kitten/NativeBase**. Managed complex app state using **Redux**, **Redux-Saga, Redux Toolkit**, and **Context API**,
- Developed single-page applications (**SPAs**) in **React** using **React-Router** to make **AJAX** calls to mock the **API** data on the front end. Built dynamically generated dropdown lists using **ES6** and **Chrome DevTools**
- Elegantly used **React-Router** techniques and **Axios** service to retrieve data from the server synchronously. Expertise using **React / Redux / JSX / Flux** to build user interfaces with states, props, middleware, store, action creators, reducers, presentational and container components, and **React Hooks**
- Contributed to internal design discussions and provided architectural direction on transitioning **Angular** web applications to **React** and **TypeScript.** Suggested scalable and secure FinTech mobile solutions using React Native and AWS Lambda, focusing on **GDPR** and **PCI-DSS** compliance.
- Designed and developed Business Portal using **Angular 8/9** and **HTML5, CSS3, JavaScript, jQuery, Bootstrap,** and **TypeScript.** Worked on unit testing for the **Angular** application using **Jasmine** and **Karma**
- Developed **Angular** components using **RXJS**, **Kendo** components, Dev-Extreme grids, **ngx-web-worker**, **ngx-cookie-service**, **ngrx-store**, and several other libraries to stream real-time Data onto the **UI Grids**
- Implemented security features such as **SSL**, single sign-on (**SSO**), and user authentication
- Created and consumed **RESTful APIs** with JavaScript, **Node.js,** and database tools like **PostgreSQL**& **MongoDB**.
- Experience working on various **UI Charting tools** such as **High Charts**, **PrimeNG,** and **JQplot**
- Optimize **SQL** queries in **MySQL** for performance, scalability, and compliance with data protection regulations
- Familiarity with event-driven and messaging with **Kafka**, **RabbitMQ**, **Apache ActiveMQ**, and **Azure Service Bus**
- Initiated **performance-tuning** by enhancing initial load times by employing code-splitting techniques to load only necessary JavaScript for each page; developed responsive web designs and enhanced the user experience.
- Performed multivariate (**MVT**) **A/B testing** using **Maxymiser**
- Created **Web Accessibility (WCAG 2.0)** and **Section 508** Evaluation report.
- Used tools like **GIT** for version controlling, Chrome Developer Tools for Debugging, and **Jenkins** for deploying the code to different environments. Developed **UI** using **UX** tools such as **Figma**

Environment: Angular8/9, Angular JS, Vue JS, Vuex, jqLite, HTML 5, CSS3, JavaScript, TypeScript, Bootstrap, Ajax, Angular, Flex, SQL, Jenkins, CI/CD, XML, JSON, Git, Restful API, AWS Cloud Services, Micro Services, Azure, Docker, Kubernetes, JIRA, WebSphere, WebLogic, Jasmine and Karma

Bed Bath & Beyond, Union, NJ **Feb 2018– Aug 2019**
Sr. Frontend Developer

Responsibilities:

- Developing Web components for an e-commerce platform using **HTML5, CSS, LESS, Bootstrap, JavaScript, jQuery, Node JS, Grunt, React, and Redux.** Used **SASS** and **LESS** for styling the **React** Components
- Designed and developed Commercial Business Portal using **React** and **JavaScript, Bootstrap,** and **TypeScript**
- Used **Webpack**, **Babel**, **Grunt**, and **Gulp** for transpilation of configuration from **TypeScript** to **JavaScript**
- Involved in the development of User Interfaces using **Material, Bootstrap**, **JavaScript**, **CSS**
- Experience working on various **UI Charting tools** such as **PrimeReact, Chart.js, Recharts, and FusionCharts**
- Integrated **FastAPI** with frontend frameworks and tools like **React** for seamless end-to-end solutions.
- Integrated **PHP** with **JavaScript** frameworks (e.g., **jQuery**, **React**) to create interactive and dynamic UI
- Developed and integrated **RESTful APIs** using **PHP**, ensuring seamless data flow and interaction between frontend and backend components. Developed **UI** reporting and **Data Visualization** using **D3.js**
- Experienced with deployments, maintenance, and troubleshooting applications on **AWS Cloud**
- Worked using **React JS** components, Forms, Events, Keys, **Routers**, **Animations**, and **Redux** concepts.
- Used **SASS**, Inline **JSX** styles, **CSS**, styles-**JSX**, **Material-UI**, **Grommet**, and **Bootstrap** for styling the components
- Design, develop, and test **NextJS**, **ReactJS**, and **Material-UI** that meet accessibility and web browser standards for the website and improve **SEO** using **SSR** (Server-Side Rendering)
- Hands-on Experience with **Angular** technology for one complete project in rebasing the application's UI using the techniques in **Angular 6/8.** Developed UI based on mockups using tools such as **Adobe XD**
- Monitored **MySQL** database systems, ensuring high availability and reliability.
- Developed single-page applications using **Angular, TypeScript, WebPack,** and **Grunt**
- Used **WCAG** Technical Standards for Web Accessibility. Used **Jest** and **Enzyme** for unit testing.
- Implemented **Docker** container for **Git** branches switching to **Jenkins** as a Continuous Integration **(CI)** server

Environment: React, Redux, MobX, Flexbox, PrimeReact, D3.JS, TypeScript, JavaScript, Angular, Node.js, Material-UI, Grommet, Next.js, GraphQL, NPM, Jenkins, jQuery, Bootstrap, Ajax, HTML5, PL/SQL, MongoDB, AWS Cloud Services, ADA, CSS3, GIT, TDD, LESS, CI/CD

AIG, Farmington, CT **March 2016 –Jan 2018**
UI developer

Responsibilities:

- Created **React** Components and developed single-page applications (**SPA**) using **React JS**
- Created reusable components using **React JS** and used React-Router to turn the application into an **SPA**
- Focused on writing minimal code in building reusable forms with their validations using **React** with **Redux**
- Used **Redux-Store** to store the React Application state and worked with middleware for the **Redux-Store**
- Experience in using **React JS** components, Forms, Events, Keys, Router, **Redux**, Animations, and **Flux** concepts
- Used **React JS** to create an interactive UI using one-way data flow, virtual **DOM**, and **JSX**.
- Used **jQuery** and **AJAX** for service calls on pages to interact with the server for rapid prototyping
- Extensively used **Webpack** to remove code dependencies and develop a **SPA** using **React JS** and React Router
- Built Web pages using **jQuery** plugins for Drag and Drop, Auto Complete, **JSON**, **JavaScript,** and **React JS**
- Built a responsive Web design using **Bootstrap** to build grids, layouts, and components
- Worked on **RESTful APIs** using **Express JS** and **Node JS**. Implemented mock services in Node.js
- Developed **Angular** Forms, Validations, Modules, **DOM**, Expressions, Directives, Controllers, and Filters, and used **Angular 4/6** and **Bootstrap** for effective design of web pages
- Implemented **lazy loading** for images and assets to load content only when it becomes visible in the viewport as part of **performance tuning.** Worked with the UX designers and developed UI using tools such as **Figma**
- Involved in using **Angular CLI** commands to run various builds locally, replicating higher environments like prod
- Used **Jenkins** to make the build process and used **Karma**, **Jasmine**, and **Protractor** to write **unit test cases**
- Log defects encountered in the application through **JIRA** during test cycles and conduct fix verification
- Worked in an **AGILE** environment and followed **SDLC** processes for stability, reliability, and performance.

Environment: React, Angular, HTML/HTML5, CSS/CSS3, SASS, LESS, jQuery, React JS, Redux, Bootstrap, Node JS,

Express JS, JSX, Flux, SASS, LESS, PL/SQL, MongoDB, AJAX, RESTful APIs, DOM, GitHub. JIRA, Agile, Docker, CI/CD,

Unisys Technologies, India. **Aug 2012 – Feb 2014**
Frontend Developer

Responsibilities:

- Experience migrating enterprise applications from legacy frameworks, including **RichFaces 3.3**, to modern UI technologies. Skilled in Java, **jQuery**, **HTML5**, **CSS3**, and **JavaScript**.
- Proficient in UI/UX design principles, responsive design, and usability testing
- Developed dynamic, robust UI screens using **CSS, HTML, React JS, JavaScript, Bootstrap, and jQuery.**
- Reengineered **RichFaces UI** components into custom **jQuery**-based modules, reducing page load times by 30%.
- Replaced UI components with **jQuery**-based solutions, enhancing performance and user experience by 25%
- Migrated legacy **JSF applications** to modern frameworks, reducing security risks and improving compliance.
- Worked with **React JS components, Forms, Events, Keys, Router, Animations, and Flux concept**
- Developed and implemented user interfaces as per the latest **W3C** standards
- Developed client-side validation code using **JavaScript and jQuery**
- Used **JIRA** as the bug tracking system to track and maintain the history of **bugs/issues**
- Used UX tools such as **Figma** to develop UI pages based on the mockups
- Implemented **AJAX** in web pages for accessing application data without refreshing the whole page for better **UX**
- Implemented interaction between frontend and backend using the **JSON** object
- Used **React JS and JavaScript** for validating client-side validations and building web components
- Added user validations and permissions by using Node JS, and used **Node JS** for server hosting
- Extensively used **NodeJS** on the front end (namespaces, closures, and custom bindings)
- Worked on tools like **Eclipse** and **GIT** repositories, installed and configured **GIT**, and synced with multiple **GitHub** repositories

Environment: React JS, HTML, CSS, JavaScript, Bootstrap, Node JS, jQuery, AJAX, JSON, Eclipse, PL/SQL, Git, JIRA

Lansys Technologies, India. **June 2008 – July 2012**
Frontend Developer

Responsibilities:

- Responsible for creating efficient designs and developing User Interaction screens according to the client's requirements using **JavaScript**, **jQuery**, **AJAX,** and **JSON**
- Used **JavaScript** and **jQuery** to make the web application user interactive
- Designed web applications using **HTML** and **CSS** and deployed the script by client-side scripting using **JavaScript**
- Executed **RESTful** web service calls for POST, PUT, PATCH, DELETE, and GET methods
- Created UI templates and functionality to be merged with the backend **REST/SOAP API** for proper communication between the front and back end to enable the efficient working of the application
- Designing the User Interface **UI/UX** and the overall look and feel of the interface on desktop and mobile
- Designed and developed **CSS** behaviors, CSS styles, CSS fonts, CSS buttons, Pseudo Classes, and Pseudo elements
- Designed and maintained **SQL scripts** for **Excel** reporting and stored procedures
- Used **jQuery** to traverse through a **DOM** tree and manipulate the nodes in the tree. Implemented the Drag and Drop functionality using the **jQuery** framework
- Used **jQuery** plugins for Drag and Drop, Widgets, Menus, User Interface, and Forms.
- Worked with unit testing of **JavaScript** applications using Karma, Jasmine.

Environment: HTML, CSS, JavaScript, XML, XHTML, jQuery, AJAX, React, SVN, Git, SQL, Linux, Windows, and Mac

Educational Background:

Masters: Master of Science, University of North Carolina, 2016
