Professional Summary:

Senior Frontend / UI Engineer with 15+ years of experience building large-scale, high-performance web applications across telecom, healthcare (FHIR/EHR/Prior Auth), banking, and e-commerce. Expertise in Angular (6–20), React (0.3–19), Next.js (SSR/SSG/ISR, App Router, API Routes, middleware, image optimization), Vue.js, React Native, TypeScript, JavaScript (ES6+), HTML5, CSS3/SCSS/SASS/LESS, Bootstrap, Material UI, Tailwind CSS, Chakra UI, Kendo UI, PrimeReact, D3, Chart.js, Blazor libraries, MudBlazor, and Blazorise, and micro-frontend / design-system architectures. Proven track record delivering EHR-embedded SMART on FHIR apps, FHIR R4–based clinical dashboards adhering to HIPAA guidelines and Data Privacy Regulations governing Protected Health Information (PHI) and prior-authorization workflows, as well as complex portals and Next.js-based marketing/portal sites integrated with Contentful CMS, AEM, Astro, and Gatsby. Deep experience with state management and UI tooling, including Redux, Redux-Saga, NgRx, Zustand, MobX, RxJS, Storybook (WCAG/ADA/508-compliant component libraries), A/B testing tools (VWO, Optimizely, Maxymiser), and strong accessibility focus. Full-stack capable with Node.js/Express, FastAPI, Python, Java/J2EE, REST and GraphQL APIs, WebSockets, microservices, and data layers spanning MongoDB, MySQL, PostgreSQL, DynamoDB, ElasticSearch, and PL/SQL. Skilled across AWS (Lambda, CloudFront, OAC/OAI, S3, DynamoDB, Lex, Connect, CloudWatch), Azure (Functions, AAD, API Management, Blob, Cosmos DB, App Insights), Docker, Kubernetes, and modern CI/CD pipelines (Jenkins, GitLab CI, Azure DevOps) with robust automated testing using Jest, Cypress, Playwright, Enzyme, Karma, Jasmine, React Testing Library. Collaborated closely with product and UX teams (Figma, Adobe XD, Framer X) to translate complex domain workflows into intuitive, responsive, secure, and maintainable front-end solutions. Developed AI-powered React applications integrating LLM services with secure AWS backend APIs, delivering intelligent, responsive user experiences. Maintained scalable backend architectures, event-driven systems, distributed services, and cloud-native deployments on AWS and Azure. Participated in architecture reviews, sprint planning, and code reviews to deliver scalable AI-native applications following modern software engineering best practices. Maintained modular AI service layers supporting extensible agent workflows, tool invocation, and enterprise system integrations. Experience building production AI applications using LLMs, Retrieval-Augmented Generation (RAG), AI agents, prompt engineering, and vector databases. Experience integrating Large Language Models (LLMs), Vision-Language Models (VLMs), and optimized Computer Vision models. Collaborated with cross-functional teams to evaluate AI model performance, optimize inference workflows, and improve end-user experience. Designed reusable prompt templates for enterprise workflows. Partnered closely with executive-level stakeholders, senior leadership, product owners, and business teams to translate strategic objectives into scalable technology solutions and actionable delivery roadmaps. Maintained AI-assisted development using GitHub Copilot, ChatGPT, and Claude to accelerate component generation, UI scaffolding, and workflow implementation.

Technical Skills:

Technologies	HTML 5, CSS3, JavaScript, Typescript, jQuery, React JS (0.3-19), Redux, Angular (6-20), ES6, NGRX, NodeJS, Express JS, Charts JS, Vue JS, Next JS, Hapi JS, Charts JS, Graph QL, Prisma, Java/J2EE, Python, Rubu on Rails, D3.js, JSON, AJAX, Material-UI, Tailwind CSS, Bootstrap, Hibernate, JDBC, Babel, .NET, C#, GoLang, Php, Laravel, WordPress, Qualtrics, Computer Vision
Testing Frameworks	Jest, Enzyme, Mocha, Jasmine, Karma, Cypress, Protractor, React Testing Library
CI/CD Tools	Maven, Jenkins, Bamboo, GitLab, GitHub Actions
IDE	Visual Studio, IntelliJ, Sublime, Notepad++, Eclipse IDE, WebStorm
Databases	Oracle, MySQL, SQL Server, MongoDB, PostgreSQL, Snowflake, DynamoDB
Build Tools	Webpack, Rollup, Grunt, Gulp, Vite

Application servers	Tomcat Server, WebSphere, WebLogic. AWS
Version Control Tools	SVN, CVS, GIT, TFS, VSTS, GitLab, GitHub, Bitbucket
Project Management	JIRA, Confluence, Trello, Workday, Rally, Monday
Project Methodologies	Agile, Scrum, Waterfall
AWS, Azure, GCP - Cloud Technologies	S3, EC2, RDS, Lambda, CDN, Cloud Watch, SNS, SQS, EKS, ECS, Amazon QuickSight

Professional Experience:

Verizon - Basking Ridge, New Jersey, & Irving, Texas **Nov 2022 - Present**
Lead - Frontend / Full Stack Development (MERN/MEAN)- Multiple Internal Projects

Responsibilities:

- Developed websites using **HTML5, CSS3, JavaScript, TypeScript**, **Bootstrap, Webpack, React 19, React Native, Angular 20, Vue.js, Next.js, Redux, Redux Toolkit, Zustand, MobX, PHP, WordPress, and Node.js**
- Developed AI-powered enterprise dashboards using **React, Typescript** & **Next.js**. Built conversational AI interfaces supporting streaming token responses. Designed reusable component libraries at enterprise scale
- Provided architectural direction for enterprise applications, driving decisions around scalability, performance, security, maintainability, cloud adoption, REST APIs, microservices, modern frontend/backend architectures, event-driven architecture, containerization, CI/CD, automated testing, observability, and DevSecOps practices.
- Provided hands-on technical leadership, mentoring, code/design reviews, and engineering best-practice guidance to development teams while ensuring solutions aligned with enterprise architecture standards.
- Strong experience integrating Large Language Models (LLMs), Vision-Language Models (VLMs), and multimodal AI capabilities into production applications for image, video, text, and metadata understanding.
- Maintained and fine-tuned custom Computer Vision models using PyTorch, TensorFlow, OpenCV, YOLO, Vision Transformers (ViT), and related deep-learning frameworks rather than relying on managed vision APIs.
- Integrated Vision-Language Models such as GPT-4 Vision, Gemini multimodal, Claude Vision, LLaVA, and similar VLM architectures for open-ended visual content understanding.
- Implemented production-grade LLM applications using OpenAI, Azure OpenAI, Amazon Bedrock, Anthropic Claude, and conversational AI experiences and other foundation-model platforms.
- Improved frontend performance through code splitting, lazy loading, memorization, efficient state management, optimized rendering, API caching, and bundle-size optimization for faster loads and improved user experience
- Built complex data-driven interfaces, including dashboards, search/filter experiences, data grids, visualization components, forms, and workflow-driven screens using **React** and modern **JavaScript/TypeScript**.
- Built the UI for the Chatbot Template Builder application that enables business users to create customized chatbots tailored to their requirements, use cases, and preferences through various configurable elements
- Developed interactive **Telecom subscriber management dashboards** for managing customer accounts, service plans, device information, activation status, usage details, and service requests.
- Designed and developed **Customer Data Platform (CDP)** solutions to ingest, unify, enrich, and activate customer data from multiple sources, including web, mobile, CRM, transactional, and third-party systems
- Implemented Telecom workflows, including **subscriber activation, service provisioning, plan changes, SIM/device management, number portability, suspension, reconnection, and service termination**.
- Built full-stack applications and APIs for **customer identity resolution, profile management, audience creation, segmentation, and customer-data activation**.
- Developed a single-page application (SPA) using **HTML5, CSS3, Bootstrap, React, Next.js, GraphQL, Express JS, NodeJS, Socket**, **SASS**, and **LESS**. Developed responsive, accessible (**WCAG**) enterprise applications.
- Developed scalable frontend architecture with **Zustand/Redux** Toolkit, TanStack Query, and Zod-based runtime validation to support schema-driven UI rendering, high-frequency state updates, and resilient **API** integrations
- Developed APIs and backend processing logic for handling **subscriber profiles, service eligibility, product catalogs, rate plans, orders, billing information, and network-service requests**.
- Experienced in AI-assisted development using **GitHub Copilot, ChatGPT,** and **Claude** to accelerate component generation, UI scaffolding, and workflow implementation

- Implemented production-grade AI applications using **Claude**, **GPT-4**, **Azure OpenAI**, and **LangChain**.
- Designed and developed AI-powered web applications using **React** and **AWS** services, integrating **LLM APIs** with secure backend services to deliver intelligent, responsive user experiences.
- Led full-stack development of **CDP-driven customer applications**, building React/Angular front ends, REST APIs, backend microservices, and data-integration services supporting unified customer profiles.
- Integrated **Amazon QuickSight** with React.js applications to deliver interactive dashboards, analytics, KPIs, charts, and operational reporting within enterprise web applications.
- Implemented processing and visualization of **Telecom** operational data such as **subscriber activity, usage information, service status, billing events, orders, and provisioning results**.
- Integrated CDP capabilities with **CRM, marketing automation, analytics, e-commerce, and customer engagement platforms** to enable personalized customer experiences.
- Built Retrieval-Augmented Generation (**RAG**) pipelines using vector databases, including Pinecone, pgvector, and **Azure AI** Search. Maintained scalable backend APIs using **Node.js, Express.js, NestJS,** and **TypeScript.**
- Led modernization of enterprise React applications using **React**, **TypeScript**, functional components, **Hooks**, **Redux Toolkit**, and React Router, improving maintainability, scalability, and developer productivity.
- Implemented **Liquibase database migration framework** for managing version-controlled schema changes, database updates, and release deployments across **PostgreSQL** environments.
- Built scalable serverless architectures using **AWS Lambda**, **API Gateway**, **IAM**, and **S3** for AI-driven applications, ensuring secure, low-latency **API** integrations.
- Hands-on experience designing, developing, and deploying scalable full-stack applications using **React, TypeScript, JavaScript, Go/Golang, Python, Java, and Node.js**. Experience developing **production-grade Go microservices, RESTful APIs, gRPC services, concurrent applications, and distributed backend systems**.
- Designed and developed scalable web applications using **PHP, Laravel, Vue.js, TypeScript, JavaScript, HTML5, CSS3, and Tailwind CSS**, supporting high-volume Telecom business operations.
- Integrated frontend applications with **ForgeRock IDM REST APIs** for user lookup, profile management, account updates, provisioning, and identity lifecycle operations.
- Worked with **SCIM**-based identity APIs to manage users, groups, memberships, profile attributes, and provisioning workflows. Implemented frontend handling for access tokens, ID tokens, refresh tokens, session expiration, silent renewal, and re-authentication scenarios.
- Maintained **ERP** integrations using **REST APIs**, **SOAP**, **GraphQL**, and middleware. Integrated SAP, Dynamics 365, Salesforce, ServiceNow, Oracle ERP, or NetSuite. Designed idempotent APIs for financial transaction processing.
- Implemented application monitoring using **Datadog**, **Dynatrace**, **CloudWatch**, **Grafana**, and **Prometheus**.
- Integrated the UI with **Snowflake** as a cloud data platform, using complex SQL queries for analytical applications, reporting, operational dashboards, and data-driven user experiences.
- Developed and maintained **RESTful APIs and backend microservices using Laravel**, implementing business logic, validation, authentication, authorization, exception handling, and standardized API responses.
- Designed Liquibase **XML/YAML/JSON changelogs** for tables, columns, indexes, constraints, sequences, views, stored procedures, and other PostgreSQL database objects. Managed **Liquibase checksums, changeSet IDs, authors, contexts, labels, and execution order** to maintain reliable database version control.
- Integrated **React** applications with **Python**-based backend services and **REST APIs** to support business workflows, data processing, and **Snowflake** integrations. Developed scalable AI services using **Python**, **FastAPI**, **Flask**, and asynchronous processing. Maintained ETL pipelines supporting AI model inference and enterprise data processing, and background processing services using Celery, Redis, RabbitMQ, or Kafka.
- Developed scalable **Ruby on Rails REST APIs** supporting full-stack web applications and complex integrations.
- Designed and implemented **Azure Data Factory** (ADF) pipelines to orchestrate data movement and integration between REST APIs, Azure services, Snowflake, and enterprise data sources.
- Integrated **Azure Data Factory** with **Snowflake** to orchestrate ingestion, transformation, and loading of data into Snowflake-based data environments
- Developed high-performance **React** applications using **Hooks**, **Context API**, **TypeScript**, and **Redux/Zustand**, delivering responsive AI-assisted user interfaces with reusable component architecture.
- Collaborated with the platform teams to implement contract-driven frontend systems using **JSON** Schema, **TypeScript** type generation, and API schema validation pipelines integrated with **FastAPI/Pydantic** services.
- Integrated **AWS Bedrock** foundation models (Anthropic **Claude**, Amazon Nova, Meta Llama, and other supported models) to build conversational AI and intelligent assistant capabilities.

- Designed and developed **generative AI** applications using Amazon **Bedrock**, integrating foundation models through secure APIs to automate enterprise workflows and improve user productivity.
- Developed and maintained enterprise-scale **React component libraries** using **Tailwind CSS** integrated with a centralized design system and design tokens for marketing and portal applications across **Next.js** and **Gatsby**
- Implemented **component APIs** reused across **SSR/SSG** platforms (**Next.js**, **Astro**), reducing code duplication
- Maintained **Storybook** documentation with interactive component playground. Improved **Storybook** coverage by documenting component APIs, accessibility guidance, design token usage, and implementation examples.
- Maintained **LookML** models, including views, explores, dimensions, and measures, to support scalable analytics and reporting. Performed **LookML** validation and testing to ensure correctness during schema changes.
- Applied **Tailwind CSS utility classes and responsive design principles (RWD)** to build modern, accessible, and mobile-friendly applications. Integrated **Contentful CMS** with dynamic content-driven **React** components
- Built and maintained full-stack survey workflows using **React**, **Next.js**, and **Go**, enabling seamless integration between web platforms and **Qualtrics**.
- Designed, developed, and maintained scalable enterprise web applications and microservices using **Python**, **Django**, **Flask**, and **FastAPI**, delivering secure, high-performance solutions for business-critical systems.
- Implemented secure authentication and authorization mechanisms using **JWT**, **OAuth2**, **RBAC**, and industry-standard security practices, ensuring compliance with enterprise security requirements.
- Integrated React single-page applications with enterprise Customer **Identity and Access Management** (**CIAM**) platforms using **OAuth 2.0** and **OpenID Connect** (OIDC) authentication flows.
- Worked with **ForgeRock** Access Management (**AM**) and Identity Management (**IDM**) for authentication, authorization, identity lifecycle, and user-management workflows. Implemented role-based access control (**RBAC**) and entitlement-based UI authorization to restrict navigation and administrative functions.
- Maintained backend and API integrations in **Golang** to manage metadata, business rules, and interoperability.
- Collaborated with backend and cloud teams to integrate **Angular** applications with **GCP** services, including **Cloud Run**, **Cloud Functions**, **Firebase Hosting**, **BigQuery**, and **Vertex AI**.
- Developed proofs-of-concept (**POCs**) to evaluate emerging **AI**, **LLM**, and **GenAI** technologies
- Secured **API** communication between Angular apps and **GCP** using **OAuth**, **API** keys, and **IAM** access control.
- Migrated monolithic front-end to a modular **AWS** architecture (**CloudFront, S3, Lambda, DynamoDB**) using **AWS CDK**. Implemented semantic versioning and npm publishing workflows for component releases.
- Developed **QuickSight Embedded Analytics** solutions, enabling users to access dashboards and visualizations directly from React-based applications without leaving the application workflow.
- Designed and optimized **PostgreSQL/MySQL database schemas** for Ruby on Rails applications, including relationships, indexes, migrations, constraints, and query optimization.
- Worked on **workflow orchestration services in Ruby on Rails**, APIs, RPA workflows, and asynchronous jobs. Implemented background processing in **Ruby on Rails using Sidekiq and Redis** for workflow execution.
- Deployed **GraphQL** microservices on **AWS Lambda** with **DynamoDB**, supporting high-traffic product **APIs**.
- Created testing pipelines (**React Testing Library** + **Playwright**) integrated into **CI/CD**.
- Designed and implemented NoSQL data models using **MongoDB/DynamoDB**, selecting appropriate partition keys, indexes, and access patterns for scalable workloads.
- Leveraged **GenAI** tools (**Copilot**, **ChatGPT**) to accelerate boilerplate creation, documentation & code refactoring
- Designed layouts on the front end and developed web pages responsive for smartphones, tablets, and Personal desktops using **HTML5, CSS3, Bootstrap, jQuery, React HOC, Redux toolkit,** and **React Promises**
- Worked on responsive web design (**RWD**) and developed webpages that could be served to desktop, tablets, and mobile environments using **React JS** and **Next JS**, focusing on usability and accessibility
- Implemented **RESTful APIs** using **FastAPI**, improving the performance and scalability of backend services.
- Built responsive layouts using **Flexbox** and **CSS Grid**, delivering seamless experiences across desktop, tablet, and mobile environments. Created reusable layout utilities, Grid templates, Flex helpers, and spacing utilities.
- Built **cross-platform components** following a unified design, reducing duplication between **React** and **Flutter**
- Shared backend services (**REST** APIs, **Firebase Auth**/**Firestore**) between both platforms to reduce duplication
- Implemented server-side rendering (**SSR**) and static site generation (**SSG**) to optimize performance and **SEO**.
- Authored unit and integration tests using **Jest** and **React Testing Library** to maintain 90%+ coverage
- Managed and optimized **MongoDB** databases, ensuring data integrity and efficient querying.
- Utilized **hooks** and **Context API** to manage state and lifecycle methods component-based architecture efficiently

- Provided development support services for engaging, including **Elastic search, HTML, CSS**, Responsive Web Design, Test Driven Development (**TDD**), Continuous Integration (**CI**), and Continuous Delivery (**CD**).
- Integrated **GraphQL** for product catalog retrieval, resulting in a more efficient and flexible data-fetching process.
- Worked with **Redux Saga,** along with **Redux thunk,** to handle asynchronous calls efficiently
- Implemented Micro Frontend (**MFE**) architecture for scalability, maintainability, and development speed.
- Implemented **JWT**-based authentication and authorization mechanisms to secure **API** endpoints.
- Experienced in integrating UI microservices with **CI/CD** pipelines using Jenkins, **GitLab CI**, or **Azure DevOps** and managing backend communication via **RESTful APIs** and **GraphQL**.
- Customized **AEM** Content Management System (**CMS)** templates and components using **HTML5, CSS3, JavaScript,** and modern frameworks (**React**, **Angular**) to deliver dynamic, content-rich experiences.
- Worked with **DevOps** engineers to deploy and troubleshoot containerized microservices on Tanzu Kubernetes Grid (**TKG**), utilizing Kubernetes Deployments, Services, ConfigMaps, Secrets, and Ingress resources.
- Built a customized agent UI for **AWS Connect** with real-time call status and analytics. Developed an interactive voice and chat assistant using **Amazon Lex** and **AWS Lambda** with improved usability and efficiency
- Managed cloud desktops, integrating **AWS EC2** instances and **VPC** networking to facilitate seamless provisioning
- Used **AWS Connect,** built a customer insights dashboard for agents, displaying live customer interactions
- Integrated **CloudFront** + **Lambda@Edge** with **OAC** for optimized caching, custom headers, and content delivery.
- Debugged **Java microservices APIs** to analyze defects and ensure backend/frontend integrity.
- Monitored and analyzed logs via **Splunk** & **Dynatrace**, identifying issues and setting alerts to enhance reliability.
- Developed reusable UI components using **Storybook** with **WCAG 2.1 compliance.** Implemented **Storybook** addons for **A11Y** (accessibility checks), Knobs/Controls (dynamic props), and Actions (event handlers)
- Integrated **Storybook** with **Figma**/**Adobe XD** designs, achieving 100% design-to-code accuracy.
- Coordinated with integrating **RESTful APIs** and integrated them with front-end applications using **Express.js** and **Python frameworks** (Flask/Django). Achieved **API** calls from back-end **NodeJS** using **React Axios**
- Optimized query performance by utilizing **SQL** queries to interact with **MySQL** and **PostgreSQL** databases,
- Used **React** along with **Framer X** to add interactivity and functionality to the designs, along with **Adobe XD**
- Implemented **performance-tuning** by efficiently handling DOM manipulation, minimizing browser reflows
- Developed unit testing scripts using **Jest, Enzyme, Cypress,** and **React test renderer** for React components
- Optimized UI performance by implementing **lazy loading**, **SSR**/**SSG** (**Next.js**), and caching strategies
- Implemented authentication and authorization using Microsoft Authentication Library (**MSAL**) with Microsoft **Entra ID**, enabling seamless **Single Sign-On** (**SSO**) and token-based access across enterprise applications.
- Implemented authentication using **OAuth2**, **JWT**, **SSO**, and enterprise identity providers.
- Worked across application and data layers to integrate **React**/**Python** applications, REST APIs, Azure services, **ADF** pipelines, and **Snowflake**. Configured **ADF** linked services, datasets, integration runtimes, triggers, parameters, and pipeline dependencies for automated data integration.
- Experience working with **Azure** services (**Azure** Functions, **AAD**, **API** Management, **Blob** Storage, **Cosmos DB**) and configured **Azure Application Insights** for real-time frontend performance monitoring and error tracking
- Streamlined UI testing and quality checks, automating **Jest** and **Cypress** tests in **Azure** Pipelines.
- Led the migration of a complex **Angular** application to **React**, enhancing performance, maintainability, and scalability. Converted **Angular** components to reusable and efficient React components, ensuring consistency
- Utilized **TypeScript** in **React** to ensure type safety and improve code quality during migration to **Angular 19**.
- Developed scalable UI components using **Angular 20**, **TypeScript**, and **SCSS** across multiple applications.
- Designed and implemented **Micro-Frontend** (MFE) architecture, allowing independent deployment and integration of UI modules into a larger host application.
- Automated application deployment using **GitHub** Actions and **AWS CI**/**CD** pipelines, reducing deployment time and improving release reliability. Containerized AI-enabled applications using **Docker** and deployed cloud-native workloads on **AWS ECS**/**EKS** with infrastructure automation.
- Integrated AWS authentication/authorization patterns with Amazon QuickSight embedded analytics to provide **secure, role-based access** to dashboards and reports.
- Maintained Infrastructure as Code (**IaC**) using **Terraform** to manage **AWS** resources, including **VPC**, **ECS**/**EKS**, Lambda, **RDS**, **S3**, **IAM**, and **CloudWatch**, enabling repeatable, secure, and scalable cloud deployments.
- Collaborated with **DevOps** to deploy containerized microservices on Docker/Kubernetes (EKS) using Terraform, implementing infrastructure versioning, security best practices, and environment-specific configurations.

- Designed efficient in-memory data models to reduce API calls and improve UI responsiveness. Improved system performance by analyzing time and space complexity (Big-O) of critical operations. Used graph traversal algorithms (BFS/DFS) for dependency resolution and workflow orchestration.
- Optimized **GIS**-enabled visualizations using **deck.gl**, **Azure Maps**, and **ArcGIS API**, implementing geocoding, routing, and spatial analysis for enhanced decision-making.
- Migrated legacy frontend applications from Create React App (CRA) to **Vite**, modernizing build configuration, environment management, module handling, and production bundling.
- Maintained containerized **Vue.js** and **React** applications deployed on **Kubernetes** platforms, collaborating with **DevOps** to manage deployments across **AWS** and Tanzu Kubernetes Grid (**TKG**) environments.
- Implemented secure authentication-authorization using **Laravel middleware, role-based access control (RBAC), API authentication, and permission-based access** for administrative and customer-facing function.
- Integrated **REST APIs**, Server-Sent Events (**SSE**), and **WebSocket**-based streaming responses to provide real-time AI-generated content and conversational user experiences.
- Implemented **AWS CloudFront OAC** (Origin Access Control) to secure **S3**-backed static assets and **Next.js** builds.
- Built responsive UIs compliant with **WCAG 2.0/2.1** standards, using **Material UI, Chakra** & **Kendo UI** libraries.
- Audited UI components with tools such as **Lighthouse**, axe, and browser dev tools to identify and fix color contrast, landmark, and **ARIA** issues. Collaborated closely with **UX** designers and product owners to translate AI workflows into intuitive, user-centric interfaces with accessibility and responsiveness in mind.
- Implemented and supported **Section 508, WCAG,** and **ADA** compliance during the development of applications.
- Translated approved **Figma**/UI designs into responsive, production-ready web pages and reusable components, ensuring pixel-accurate implementation across desktop, tablet, and mobile devices
- Implemented responsive navigation, accessibility-compliant components, keyboard interactions, semantic HTML, ARIA attributes, and **WCAG**-aligned development standards to improve usability for all users.
- Designed reusable prompt templates, monitored prompt drift, and model. Implemented prompt **A/B** testing.
- Led the end-to-end redesign and migration of the VIED website to a modern **WordPress**-based infrastructure, improving maintainability, content management capabilities, usability, and overall digital experience.

Environment: React JS, Node JS, Redux, MobX, Axios, NPM, Next JS, GraphQL, Vue JS, Vuex, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, SASS, LESS, jQuery, AJAX, JSON, PL/SQL, Mongo DB, Jenkins, AWS Cloud, Azure, CI/CD, Micro Services, SVN, GIT, Docker, Kubernetes, Jest, Enzyme, Micro Frontend (MFE), Microservices, Responsive Web Design

Cigna, New York, NY **July 2020 – Oct 2022**
Sr. Frontend Developer

Responsibilities:

- Designed and developed Portal using **Angular 12/13/14** along with **HTML5, CSS3, JavaScript, jQuery, Bootstrap,** and **TypeScript.** Worked on **Angular** with **TypeScript** and other latest client-side technologies, including **ReactJS, ES6, Gulp, NodeJS, RxJS, Angular CLI, Webpack, Chrome DevTool, Karma, and Jasmine**
- Developed and maintained **HIPAA-compliant full-stack applications**, implementing appropriate safeguards for **Protected Health Information (PHI)** across React/React Native frontends, Node.js/Express APIs, databases, and AWS services.
- Implemented **auditability and traceability** for sensitive-data access and system activities, supporting HIPAA security and compliance requirements.
- Implemented **secure authentication and authorization** using **AWS Cognito, OAuth/JWT, role-based access control (RBAC), and least-privilege principles** to protect sensitive healthcare and customer data.
- Incorporated **HIPAA** and data privacy requirements throughout the **SDLC**, including secure design reviews, code reviews, automated security/testing practices, vulnerability remediation, and controlled CI/CD deployments.
- Participated in **HIPAA risk assessments, security reviews, incident response, and compliance remediation**, working with cross-functional teams, identify vulnerabilities and strengthen controls for healthcare applications.
- Developed scalable web applications with **TypeScript** and **Python**, enhancing performance and maintainability.
- Implemented Angular front-end modules that consume **FHIR**-based REST APIs (R4) for patient demographics, encounters, medications, and lab results, enabling real-time clinical data views inside the **EHR**.
- Built reusable TypeScript models and services around **FHIR** resources (e.g., Patient, Observation, Condition, Coverage, Claim) to standardize data access across multiple Angular modules.

- Integrated **SMART** on **FHIR** app front-end flows, including **OAuth2** / **OpenID** Connect launch, token handling, and secure context passing from the **EHR** to the Angular SPA.
- Applied **HIPAA**-aware development practices when handling user identity, authorization, protected workflows, logging, and frontend data exposure.
- Developed **EHR**-embedded Angular components to display patient charts, timelines, and lab trends, optimizing change detection and virtual scrolling for large clinical datasets. Implemented role-based UI (physician, nurse, billing specialist) driven by claims/authorization status and permission metadata from the EHR.
- Collaborated with clinicians and product teams to translate clinical workflows (e.g., chart review, order entry, prior auth submission) into intuitive UI flows with minimal clicks and clear decision support.
- Optimized application performance and scalability through asynchronous processing, caching strategies, database query tuning, and efficient API design, significantly improving response times and system throughput.
- Developed and maintained high-performance, patient-facing web applications using **Angular** and **Blazor**, enabling seamless provider discovery, appointment scheduling, cancellation, and care management across multiple healthcare services. Used libraries such MudBlazor or Blazorise that are specific to Blazor for UI styling
- Built dynamic, reusable UI components leveraging Angular (TypeScript, RxJS, NgRx) and Blazor (C#, Razor, WebAssembly, Server) to deliver scalable, modular, and maintainable front-end architecture.
- Integrated applications with **Microsoft Entra ID** through App Registrations, configuring **OAuth** 2.0, OpenID Connect, delegated permissions, application permissions, and role-based access controls (**RBAC**)
- Authored and maintained **Storybook** stories for **Tailwind**-based component libraries covering variants, themes, responsive layouts, and interaction states. Collaborated with UX designers to translate **Figma** design tokens into reusable **Tailwind** theme configurations, ensuring design-to-code consistency. Built accessible **Tailwind**-based UI components compliant with **WCAG 2.1**
- Worked with Kubernetes-based deployment platforms, including **AWS**-managed environments and **VMware** Tanzu Kubernetes Grid (**TKG**), to deploy, monitor, and maintain containerized web applications.
- Implemented secure access to **Microsoft Azure** Storage Accounts, Key Vaults, and other Azure services using MSAL-generated access tokens, managed identities, and least-privilege security principles.
- Managed data processing pipelines using **PySpark** and **SQL**, ensuring efficient dataset transformations.
- Optimized ORM queries, integrated Celery, Redis, RabbitMQ, and asynchronous task processing frameworks. Designed reusable Django applications and modular service components.
- Migrated from **Vue.js v3** to **Angular 14**, focusing on component reusability, state management, and routing
- Addressed differences in lifecycle hooks between **Vue.js** and Angular, adapting code to **Angular 14**'s lifecycle methods such as **ngOnInit**, **ngOnChanges**, and **ngOnDestroy** for proper component management
- Experience with the **Vue.js** ecosystem, including setting up projects with **Vue CLI**, managing global state with **VueX**, handling navigation using **Vue Router**, and utilizing **Vite** for faster builds and optimized workflows
- Experienced in integrating **RESTful APIs** into **Vue.js** applications using **Axios** and **Fetch API**
- Implemented secure access patterns for **AI APIs** using **GCP IAM** and environment-based configuration.
- Integrate with frontend technologies like **HTML**, **CSS**, **JavaScript**, and **AJAX** for building user interfaces
- Responsible for deployments on Docker Compose environment for **NodeJS** apps running on a stack with **PostgreSQL** and **Elastic Search** on **AWS.** Experience in using **Azure** functions to talk to the UI.
- Experience working on various **UI Charting tools** such as **PrimeReact, Chart.js, Recharts,** and **FusionCharts**
- Managed **SQL** databases (**MySQL**, **PostgreSQL**, **SQLite**), including schema design, indexing, and optimization to ensure efficient data retrieval and storage. Resolved database-related issues in **MySQL,** minimizing downtime
- Experience using **Webpack**, **Babel**, **Grunt**, and **Gulp** for transpiration (compilation) configuration for **converting TypeScript** to **JavaScript.** Maintained **QA** environment using **AWS EC2** with **GitLab CI/CD**
- Experience working with **RESTful** Web Services and implementing **RESTful APIs** and **SOAP** protocols.
- Experienced in using **GitLab CI** and **Jenkins** for **CI** and End-to-End automation for all builds and **CD**
- Utilized tools like **Jenkins, Docker, Docker Compose**, and Helm to build, test, and deploy code
- Used **Framer X**, **Adobe XD**, and Figma for prototyping interactive user interfaces provided by the **UX** team.
- Integrated data visualizations using **Tableau**/**Power BI**, enabling data-driven decision-making for stakeholders.
- Implemented **performance-tuning** strategies such as reducing the number of **HTTP** requests by combining **CSS** and **JavaScript** files, using image sprites, and implementing browser caching. Used **SASS** and **LESS**
- Familiar with version control systems and collaboration tools like **Git** and **Azure DevOps**
- Supported maintenance of mobile applications using **Apache Cordova**, leveraging web technologies (HTML5, CSS3, JavaScript) for cross-platform compatibility. Worked with **Grunt** and **Gulp** for task runner configurations

- Also used Visual Website Optimizer (**VWO**) and **Optimizely** for **A/B testing** using dashboards for campaigns
- Familiarity with real-time data processing with **Kafka**, **RabbitMQ, Node.js**, **RESTful APIs**, and **WebSockets**
- Collaborated with cross-functional teams working in **Agile** or **DevOps** environments.

Environment: Angular 10/11/12/13/14, React JS, Node JS, Redux, MobX, Axios, NPM, Vue JS, Vuex, Next JS, GraphQL, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, SASS, LESS, jQuery, AJAX, JSON, Mongo DB, Jenkins, AWS Cloud, Azure, CI/CD, Micro Services, SVN, GIT, Docker, Kubernetes, Jest, Enzyme, Microservices, WebSphere, WebLogic

PNC Bank, Pittsburgh, PA **Sep 2019- June 2020**
Sr. UI Developer

Responsibilities:

- Transition legacy Cordova/Angular mobile app to **React Native**, enhancing performance and modernizing UI
- Developed a white-label **React Native** application supporting rapid customization and deployment for multiple branded clients. Utilized **TypeScript** to improve code quality, readability, and long-term maintainability.
- Built custom UI components and responsive layouts using **Flexbox**, **StyleSheet**, and **react-native-paper/UI Kitten/NativeBase**. Managed complex app state using **Redux**, **Redux-Saga, Redux Toolkit**, and **Context API**,
- Developed single-page applications (**SPAs**) in **React** using **React-Router** to make **AJAX** calls to mock the **API** data on the front end. Built dynamically generated dropdown lists using **ES6** and **Chrome DevTools**
- Elegantly used **React-Router** techniques and **Axios** service to retrieve data from the server synchronously. Expertise using **React / Redux / JSX / Flux** to build user interfaces with states, props, middleware, store, action creators, reducers, presentational and container components, and **React Hooks**
- Documented **Tailwind CSS** best practices, design token standards, and component development guidelines
- Contributed to internal design discussions and provided architectural direction on transitioning **Angular** web applications to **React** and **TypeScript.** Suggested scalable and secure FinTech mobile solutions using React Native and AWS Lambda, focusing on **GDPR** and **PCI-DSS** compliance.
- Designed and developed Business Portal using **Angular 8/9** and **HTML5, CSS3, JavaScript, jQuery, Bootstrap,** and **TypeScript.** Worked on unit testing for the **Angular** application using **Jasmine** and **Karma**
- Developed **Angular** components using **RXJS**, **Kendo** components, Dev-Extreme grids, **ngx-web-worker**, **ngx-cookie-service**, **ngrx-store**, and several other libraries to stream real-time Data onto the **UI Grids**
- Implemented security features such as **SSL**, single sign-on (**SSO**), and user authentication
- Created and consumed **RESTful APIs** with JavaScript, **Node.js,** and database tools like **PostgreSQL**& **MongoDB**.
- Experience working on various **UI Charting tools** such as **High Charts**, **PrimeNG,** and **JQplot**
- Optimize **SQL** queries in **MySQL** for performance, scalability, and compliance with data protection regulations
- Familiarity with event-driven and messaging with **Kafka**, **RabbitMQ**, **Apache ActiveMQ**, and **Azure Service Bus**
- Initiated **performance-tuning** by enhancing initial load times by employing code-splitting techniques to load only necessary JavaScript for each page; developed responsive web designs and enhanced the user experience.
- Performed multivariate (**MVT**) **A/B testing** using **Maxymiser**
- Created **Web Accessibility (WCAG 2.0)** and **Section 508** Evaluation report.
- Used tools like **GIT** for version controlling, Chrome Developer Tools for Debugging, and **Jenkins** for deploying the code to different environments. Developed **UI** using **UX** tools such as **Figma**

Environment: Angular8/9, AngularJS, VueJS, Vuex, jqLite, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, Ajax, Angular, Flex, SQL, Jenkins, CI/CD, XML, JSON, Git, Restful API, AWS Cloud Services, Micro Services, Azure, Docker, Kubernetes, JIRA, WebSphere, WebLogic, Jasmine, and Karma

Bed Bath & Beyond, Union, NJ **Feb 2018– Aug 2019**
Sr. Frontend Developer

Responsibilities:

- Developing Web components for an e-commerce platform using **HTML5, CSS, LESS, Bootstrap, JavaScript, jQuery, Node JS, Grunt, React, and Redux.** Used **SASS** and **LESS** for styling the **React** Components
- Designed and developed Commercial Business Portal using **React** and **JavaScript, Bootstrap,** and **TypeScript**
- Used **Webpack**, **Babel**, **Grunt**, and **Gulp** for transpilation of configuration from **TypeScript** to **JavaScript**
- Involved in the development of User Interfaces using **Material, Bootstrap**, **JavaScript**, **CSS**
- Experience working on various **UI Charting tools** such as **PrimeReact, Chart.js, Recharts, and FusionCharts**
- Integrated **FastAPI** with frontend frameworks and tools like **React** for seamless end-to-end solutions.
- Integrated **PHP** with **JavaScript** frameworks (e.g., **jQuery**, **React**) to create interactive and dynamic UI
- Developed and integrated **RESTful APIs** using **PHP**, ensuring seamless data flow and interaction between frontend and backend components. Developed **UI** reporting and **Data Visualization** using **D3.js**
- Utilized **J2EE** frameworks such as **Spring**, **Hibernate**, **Struts**, and **JSF** for application development
- Exposure to Application Servers like **IBM WebSphere, BEA WebLogic, Apache Tomcat,** and **JBoss**.
- Worked using **React JS** components, Forms, Events, Keys, **Routers**, **Animations**, and **Redux** concepts.
- Used **SASS**, Inline **JSX** styles, **CSS**, styles-**JSX**, **Material-UI**, **Grommet**, and **Bootstrap** for styling the components
- Design, develop, and test **NextJS**, **ReactJS**, and **Material-UI** that meet accessibility and web browser standards for the website and improve **SEO** using **SSR** (Server-Side Rendering)
- Hands-on Experience with **Angular** technology for one complete project in rebasing the application's UI using the techniques in **Angular 6/8.** Developed UI based on mockups using tools such as **Adobe XD**
- Monitored **MySQL** database systems, ensuring high availability and reliability.
- Developed single-page applications using **Angular, TypeScript, WebPack,** and **Grunt**
- Used **WCAG** Technical Standards for Web Accessibility. Used **Jest** and **Enzyme** for unit testing.
- Implemented **Docker** container for **Git** branches switching to **Jenkins** as a Continuous Integration **(CI)** server

Environment: React, Redux, MobX, Flexbox, PrimeReact, D3.JS, TypeScript, JavaScript, Angular, Node.js, Material-UI, Grommet, Next.js, GraphQL, NPM, Jenkins, jQuery, Bootstrap, Ajax, HTML5, PL/SQL, MongoDB, AWS Cloud Services, ADA, CSS3, GIT, TDD, LESS, CI/CD

AIG, Farmington, CT **March 2016 –Jan 2018**
UI developer

Responsibilities:

- Created **React** Components and developed single-page applications (**SPA**) using **React JS**
- Created reusable components using **React JS** and used React-Router to turn the application into an **SPA**
- Focused on writing minimal code in building reusable forms with their validations using **React** with **Redux**
- Used **Redux-Store** to store the React Application state and worked with middleware for the **Redux-Store**
- Experience in using **React JS** components, Forms, Events, Keys, Router, **Redux**, Animations, and **Flux** concepts
- Used **React JS** to create an interactive UI using one-way data flow, virtual **DOM**, and **JSX**.
- Used **jQuery** and **AJAX** for service calls on pages to interact with the server for rapid prototyping
- Extensively used **Webpack** to remove code dependencies and develop a **SPA** using **React JS** and React Router
- Built Web pages using **jQuery** plugins for Drag and Drop, Auto Complete, **JSON**, **JavaScript,** and **React JS**
- Built a responsive Web design using **Bootstrap** to build grids, layouts, and components
- Worked on **RESTful APIs** using **Express JS** and **Node JS**. Implemented mock services in Node.js
- Developed **Angular** Forms, Validations, Modules, **DOM**, Expressions, Directives, Controllers, and Filters, and used **Angular 4/6** and **Bootstrap** for effective design of web pages
- Implemented **lazy loading** for images and assets to load content only when it becomes visible in the viewport as part of **performance tuning.** Worked with the UX designers and developed UI using tools such as **Figma**
- Involved in using **Angular CLI** commands to run various builds locally, replicating higher environments like prod
- Used **Jenkins** to make the build process and used **Karma**, **Jasmine**, and **Protractor** to write **unit test cases**
- Log defects encountered in the application through **JIRA** during test cycles and conduct fix verification
- Worked in an **AGILE** environment and followed **SDLC** processes for stability, reliability, and performance.

Environment: React, Angular, HTML/HTML5, CSS/CSS3, SASS, LESS, jQuery, React JS, Redux, Bootstrap, Node JS,

Express JS, JSX, Flux, SASS, LESS, PL/SQL, MongoDB, AJAX, RESTful APIs, DOM, GitHub. JIRA, Agile, Docker, CI/CD,

Unisys Technologies, India. **Aug 2012 – Feb 2014**
Frontend Developer

Responsibilities:

- Experience migrating enterprise applications from legacy frameworks, including **RichFaces 3.3**, to modern UI technologies. Skilled in Java, **jQuery**, **HTML5**, **CSS3**, and **JavaScript**.
- Proficient in UI/UX design principles, responsive design, and usability testing
- Developed dynamic, robust UI screens using **CSS, HTML, React JS, JavaScript, Bootstrap, and jQuery.**
- Reengineered **RichFaces UI** components into custom **jQuery**-based modules, reducing page load times by 30%.
- Replaced UI components with **jQuery**-based solutions, enhancing performance and user experience by 25%
- Migrated legacy **JSF applications** to modern frameworks, reducing security risks and improving compliance.
- Worked with **React JS components, Forms, Events, Keys, Router, Animations, and Flux concept**
- Developed and implemented user interfaces as per the latest **W3C** standards
- Developed client-side validation code using **JavaScript and jQuery**
- Used **JIRA** as the bug tracking system to track and maintain the history of **bugs/issues**
- Used UX tools such as **Figma** to develop UI pages based on the mockups
- Implemented **AJAX** in web pages for accessing application data without refreshing the whole page for better **UX**
- Implemented interaction between frontend and backend using the **JSON** object
- Used **React JS and JavaScript** for validating client-side validations and building web components
- Added user validations and permissions by using Node JS, and used **Node JS** for server hosting
- Extensively used **NodeJS** on the front end (namespaces, closures, and custom bindings)
- Worked on tools like **Eclipse** and **GIT** repositories, installed and configured **GIT**, and synced with multiple **GitHub** repositories

Environment: React JS, HTML, CSS, JavaScript, Bootstrap, Node JS, jQuery, AJAX, JSON, Eclipse, PL/SQL, Git, JIRA

Lansys Technologies, India. **June 2008 – July 2012**
Frontend Developer

Responsibilities:

- Responsible for creating efficient designs and developing User Interaction screens according to the client's requirements using **JavaScript**, **jQuery**, **AJAX,** and **JSON**
- Used **JavaScript** and **jQuery** to make the web application user interactive
- Designed web applications using **HTML** and **CSS** and deployed the script by client-side scripting using **JavaScript**
- Executed **RESTful** web service calls for POST, PUT, PATCH, DELETE, and GET methods
- Created UI templates and functionality to be merged with the backend **REST/SOAP API** for proper communication between the front and back end to enable the efficient working of the application
- Designing the User Interface **UI/UX** and the overall look and feel of the interface on desktop and mobile
- Designed and developed **CSS** behaviors, CSS styles, CSS fonts, CSS buttons, Pseudo Classes, and Pseudo elements
- Designed and maintained **SQL scripts** for **Excel** reporting and stored procedures
- Used **jQuery** to traverse through a **DOM** tree and manipulate the nodes in the tree. Implemented the Drag and Drop functionality using the **jQuery** framework
- Used **jQuery** plugins for Drag and Drop, Widgets, Menus, User Interface, and Forms.
- Worked with unit testing of **JavaScript** applications using Karma, Jasmine.

Environment: HTML, CSS, JavaScript, XML, XHTML, jQuery, AJAX, React, SVN, Git, SQL, Linux, Windows, and Mac

Educational Background:
Masters: Master of Science, University of North Carolina, 2016
